**My professional career has been spent primarily in business-to-business sales ranging from waste stream to technical account management, where I am now. I thoroughly enjoy working directly with my clients to solve the facility issues that tend to be out of their expertise. I have been in the HVAC and plumbing industry for 6 years now and see this as my career path going forward.**

**Prior to the past 12 years in sales, I worked in the restaurant industry where I have worked every position from dish washer to general manager while I pursued my undergraduate degree. Once I finished the degree in sociology, I pursued my MBA while beginning my career. Though I learned much in both programs, I am a big believer in firsthand experience and tech schools. I have participated in organization promoting this and hope to continue to do so as our country is severely lacking in trades people.**

**My wife and I moved here from Denver, CO a while back and have been completely happy with our move. She is originally from Chattanooga, TN and I grew up in south Texas. We have been married for almost two years now and have a Canary Mastiff and a sketchy cat. We both are into nearly all the same hobbies except she is a skier while I am a snowboarder. I introduced her to hunting a few years ago and we both love the activity. During the summers we camp and spend time kayaking. The big thing we do year round is live music, even exceeding 30 shows in a year at one point.**
