

Bio – Drue Seamans

Hi There! My name is Drue Seamans and I have six years of engineering experience, specializing in site-civil layout and utility design. I have contributed to design efforts for multi-family commercial developments, single family housing, and low income housing projects in the City of Missoula and beyond. I work successfully as part of large multidisciplinary teams and have strong communication, organization, and project coordination skills.

In addition to my career, I enjoy reading, fishing, volleyball, skiing and cooking. I'm constantly seeking anytime I can get together with friends and or do something fun and adventurous outdoors.

After graduating college and landing a job at WGM Group in 2020, I was nervous to move away from home in such an uncertain time. I'm blown away everyday by the sense of welcomeness and community that has embraced me in Missoula and feel really honored to give back to the community through the work I do every day. Recently a favorite project that I have worked on has been the Scott Street Redevelopment project on the northside that proposes an amazing array of mixed neighborhood use, affordable housing, and multi-family dwelling units. It has been a massive collaboration with developers, design teams, and the City to bring a unique project to life.
